Materials Characterization: Introduction To Microscopic And Spectroscopic Methods

Synopsis

Now in its second edition, this continues to serve as an ideal textbook for introductory courses on materials characterization, based on the author's experience in teaching advanced undergraduate and postgraduate university students. The new edition retains the successful didactical concept of introductions at the beginning of chapters, exercise questions and an online solution manual. In addition, all the sections have been thoroughly revised, updated and expanded, with two major new topics (electron backscattering diffraction and environmental scanning electron microscopy), as well as fifty additional questions - in total about 20% new content. The first part covers commonly used methods for microstructure analysis, including light microscopy, X-ray diffraction, transmission and scanning electron microscopy, as well as scanning probe microscopy. The second part of the book is concerned with techniques for chemical analysis and introduces X-ray energy dispersive spectroscopy, fluorescence X-ray spectroscopy and such popular surface analysis techniques as photoelectron and secondary ion mass spectroscopy. This section concludes with the two most important vibrational spectroscopies (infra-red and Raman) and the increasingly important thermal analysis. The theoretical concepts are discussed with a minimal involvement of mathematics and physics, and the technical aspects are presented with the actual measurement practice in mind. Making for an easy-to-read text, the book never loses sight of its intended audience.

Book Information

Hardcover: 392 pages

Publisher: Wiley-VCH; 2 edition (October 28, 2013)

Language: English

ISBN-10: 3527334637

ISBN-13: 978-3527334636

Product Dimensions: 6.9 x 1 x 10 inches

Shipping Weight: 2.2 pounds (View shipping rates and policies)

Average Customer Review: 4.5 out of 5 stars 4 customer reviews

Best Sellers Rank: #345,495 in Books (See Top 100 in Books) #21 in Books > Science & Math > Experiments, Instruments & Measurement > Microscopes & Microscopy #347 in Books > Engineering & Transportation > Engineering > Materials & Material Science > Materials Science #2476 in Books > Science & Math > Chemistry

Yang Leng is Professor, specialized in materials science and engineering, at The Hong Kong University of Science and Technology (HKUST). His research focuses on mechanical behavior of engineering materials, biomedical materials, and novel materials processing. Professor Leng has extensively published in international journals. In addition, he has actively engaged in industrial consultancy. His contribution to teaching materials science and engineering is exemplified by the Teaching Excellence Appreciation award from the HKUST.

Great book for XRD, Raman, TGA/DSC, SEM, TEM. The only reason I did not give it 5 stars was because I would have liked it if it also included DMA which it does not.

It is a good book for beginners but not deep enough for learning techniques or appropriate way of data analysis.

Very good

Good book , its a rental so not much to say about that, fast shipping
