Grade 7-12-- Beginning with a brief description of sound and the anatomy of the ear, Mango proceeds to describe hearing loss occurs, its diagnosis, and treatment. She concentrates on the education of the deaf, thoroughly discussing--in a somewhat wordy and repetitive section--the controversies about manual or oral communication methods. She explains useful aids, from mechanical devices to dogs, and describes firsthand what it is like to be hearing impaired. This is an updated, more comprehensive explanatory presentation than Deafness (Watts, 1980; o.p.) by Jane Hyman. The black-and-white illustrations include muddy photos of people and clear, easy-to-read diagrams. Addresses of organizations appear in the appendix, as does a bibliography of related nonfiction and fiction.-Martha Gordon, South Salem Library, NYC
