Christine Beall, NCARB, CCS, is a member of ASTM Committees C-12 (Masonry Mortar), C-15 (Manufactured Masonry Units), and E-6 (Building Performance). She has more than 30 years' experience in the design, specification, construction, and inspection of residential, commercial, institutional, and industrial buildings. Christine is the author of the McGraw-Hill publications, Concrete and Masonry Databook and Thermal and Moisture Protection Manual.

Ok, not as detailed in some areas as I would have like. Does give an overall explanation of almost all types of masonry (that I am familiar with). I was looking more for a text book with calculations to use in my line of work (engineer).

After reviewing this book and reading Chapter 14 - Structural Masonry, I have come to the conclusion that this book is purely for supplemental to the design a structural masonry. The book is very good at referring to other information such as ACI 530 to actually design masonry. This book contains no examples or design methods that would be useful for a practicing engineer. I believe that this book may be useful for architects, construction managers, or purely for use academically for engineers for supplemental information. Fortunately, I found this book for around \$20.00 which is about the maximum I would pay for this book. If you find yourself struggling with the design of structural masonry DO NOT purchase this book, there are other resources that are out there to help. As far as details or "extra information" on the subject for masonry then this is definitely a good buy only if it's under \$25.00.

The other reviewers are correct that this book is not for engineers, but it was not intended to be. It is aimed primarily at architects, but can be helpful to contractors and masonry subcontractors as well.

i receive it very fast. great and good experience. Definitely a good purchase. I was looking for a replacement for my chef's product and this looks to be a really well made product. Its sharp, with a nice weight to it. Will definitely recommend to anyone looking for a good product at a reasonable price. this price is valuable. in my family it is necessary,
