# Science And Technology In The Global Cold War (Transformations: Studies In The History Of Science And Technology)

## Synopsis

The Cold War period saw a dramatic expansion of state-funded science and technology research. Government and military patronage shaped Cold War technoscientific practices, imposing methods that were project oriented, team based, and subject to national-security restrictions. These changes affected not just the arms race and the space race but also research in agriculture, biomedicine, computer science, ecology, meteorology, and other fields. This volume examines science and technology in the context of the Cold War, considering whether the new institutions and institutional arrangements that emerged globally constrained technoscientific inquiry or offered greater opportunities for it. The contributors find that whatever the particular science, and whatever the political system in which that science was operating, the knowledge that was produced bore some relation to the goals of the nation-state. These goals varied from nation to nation; weapons research was emphasized in the United States and the Soviet Union, for example, but in France and China scientific independence and self-reliance dominated. The contributors also consider to what extent the changes to science and technology practices in this era were produced by the specific politics, anxieties, and aspirations of the Cold War. Contributors: Elena Aronova, Erik M. Conway, Angela N. H. Creager, David Kaiser, John Krige, Naomi Oreskes, George Reisch, Sigrid Schmalzer, Sonja D. Schmid, Matthew Shindell, Asif A. Siddiqi, Zuoyue Wang, Benjamin Wilson

## Book Information

Series: Transformations: Studies in the History of Science and Technology

Paperback: 472 pages

Publisher: The MIT Press (October 31, 2014)

Language: English

ISBN-10: 0262526530

ISBN-13: 978-0262526531

Product Dimensions: 7 x 0.8 x 9 inches

Shipping Weight: 1.6 pounds (View shipping rates and policies)

Average Customer Review: 4.0 out of 5 stars 1 customer review

Best Sellers Rank: #1,077,583 in Books (See Top 100 in Books) #33 in Books > Engineering & Transportation > Engineering > Reference > Research #1019 in Books > Books > Science & Math > Technology > Social Aspects #1866 in Books > Politics & Social Sciences > Politics & Government > Public Affairs & Policy > Economic Policy

## Customer Reviews

Naomi Oreskes is Professor of the History of Science and Affiliated Professor of Earth and Planetary Sciences at Harvard University. John Krige is Kranzberg Professor in the School of History, Technology, and Society at the Georgia Institute of Technology.

A very valuable reference for people who study science and technology, correcting some widely held misperceptions. Anyone writing technically-oriented history of the second half of the twentieth century will find useful linkages here between the technical events and the political maneuverings of the three superpowers that managed to fight the Cold War without actually terminating life on Earth. I was particularly struck by the revelations of competition within the Soviet Union.
